Out and about in the streets of Linz, trying to document what is going on: Is there life available? Roaming! Bought some 1976 Kodachrome K-40 from Heinz Jauernig, who once ran a photo store in upper Austria, or so I read on the internet forum. Developed with Kaffenol in the Darkroom, I ripped the film because it was so entangled, then I had to reglue it! Scanned with the super 8 digitalisator, sound from BEHRINGER MS-101 RD analog synthesizer on tape. I inverted it but did not turn down the saturation; I preferred to keep the blue and the yellow over the greyscales.
